

## The Birds of Pantiacolla Lodge (updated December 2010)

The list contains 596 species, but 22 species are not certain.

From the period 1997-1998 often dates like place, description of the bird and sometimes also the observer are not clear. For this reason I distinguish different categories in the estimated status.

The birds with a status c(ommon), f(airly common), u(ncommon) or r(are) have been seen by different people on different dates. If the columns of observer 1,2 and 3 are filled with X's it means that the species is seen by many observers.

The birds with the status X,Y and Z are seen only once.

X = 100 % reliable (74 species)

Y = lacking of dates/ difficult to identify/ not 100 % reliable (16 species)

Z = supposed mistakes (6 species)
